Water Protection Tips

- keep fuels and oils out of watercourses and storm drains
- bathe in tubs and showers; avoid using soaps and shampoos in source waters like lakes and rivers
- watch your wake when boating
- confine shoreline access at cottages to 10% of frontage
- maintain your boat engine or upgrade to more efficient models, such as 4-stroke
- clean the boat hull to avoid transferring invasive species or other contaminants

This project has received funding support from the Ontario Ministry of the Environment. Such support does not indicate endorsement by the Ministry of the contents of this material.

BE A WATER STEWARD

We all need clean water to survive. Protecting water at its source is the first step in a multi-barrier approach to drinking water source protection. It is time to take actions that will preserve our valuable water resources.

Water is used in the production of most consumer goods and the energy that powers our lives. Recycle, compost and donate unused items to reduce the burden on landfills and maximize the lifespan of items.

**RETHINK YOUR
WATER
FOOTPRINT.
LOOK AT HOW
YOU USE WATER
EACH DAY.**

"The Clean Water Act is designed to protect drinking water at the source as part of an overall commitment to human health and the environment."

- Ministry of the Environment
